

Intentions of zone change:

6310 Poplar St is in a residential area. The property has a two bedroom house with a concrete patio with attached roof for coverage. A double wide garage is located behind the house. Neighbors occupy both sides of the house with neighbors behind and across the street. I am wanting to enclose the patio with two 12" sides and one 32' front with one door and two windows. The reason for this is that this house along with many other houses on this street have an outside entrance to the basement of the house. The entrance is on the patio porch. The laundry machines are downstairs and to have the enclosure on the porch would be nice during inclement weather and the security of the entrance being inside instead of outside.

In Submittal Requirements Items 1-6. The adding of three walls to the patio as I read what is asking, does not seem to impact any one of these questions.

I am requesting a zone change because we cannot make any building additions under the new zoning.
