

South Adams County Water & Sanitation District Public Meeting November 29 Comments

Below is a summary of the comments received from community members at the public meeting held on November 29, about the Klein Enhancement Project for PFAS:

- Noise from the existing property, and concerns about noise from construction.
- Wildlife will be disturbed and pushed towards their homes.
- Lights from the current facility are very bright.
- The new project will be located too close to existing homes on Quebec St. Would like the new facility to be built at a different location.
- Would like the District to consider adding a tree line, or wall or noise barrier.
- Community members were interested in what the remaining portion of the site will be in the future.
- Residents asked to not add unnecessary asphalt and concrete and suggested more waterwise landscaping.
- Suggested to replace the current generator with a newer, quieter model.
- Suggested the District investigate renewable energy such as solar.
