## 1. Executive Summary

### 1.1. Summary

Recommendations are listed in Section 1.3 – Summary of Recommendations (Page 3).

This report is submitted on behalf of WT Group, in connection with its application to Commerce City for site plan approval. The Traffic Impact Study (TIS) conducted by CESO, Inc. identifies the traffic related impacts, if any, associated with the Proposed Car Wash Development; referred to herein as “Proposed Car Wash Development.”

The Proposed Car Wash Development is to be located at 12411 East 104th Avenue within Commerce City, Adams County, Colorado. The full buildout of the Proposed Car Wash Development is projected to include a 4,600 S.F. car wash building with one (1) car wash tunnel and three (3) queuing lanes. The Proposed Car Wash Development is projected to include approximately 27 parking spaces for passenger cars, with 5 of those spaces being employee parking.

WT Group retained CESO, Inc. to prepare the Traffic Impact Study for the Proposed Car Wash Development and present details of a safe and efficient access system relating to WT Group’s application for approval of the following access point:

- Construction of the Site driveway connecting to the internal east/west strip shopping center road.

The Traffic Impact Study focused on evaluating the Existing, 2025 No-Build, 2025 Build, 2045 No-Build, and 2045 Design Year Traffic conditions near the site.

### 1.2. Conclusions

The full buildout of the Proposed Car Wash Development is estimated to generate 38 trips during the Weekday AM Peak Hour (19 inbound and 19 outbound) and 78 trips during the Weekday PM Peak Hour (39 inbound and 39 outbound).

Trips for the Site Generated Traffic Volumes are anticipated to approach and depart the Site following the distribution patterns illustrated on Figure 6.

Synchro Version 12.0 HCM 7<sup>th</sup> Edition TWSC and Signalized methodology was used to analyze the current level of service at the key study intersections.

Under the **Existing Traffic Scenario**, the signal-controlled intersection of E. 104th Avenue & Highway 2 operates at an overall level of service (LOS) “F” during the Weekday AM Peak Hour and level of service “E” during the Weekday PM Peak Hour. The signal-controlled intersection of E. 104th Avenue & Revere Street operates at an overall level of service “C” during the Weekday AM Peak Hour and level of service “B” during the Weekday PM Peak Hour. In addition, the individual movements of the stop-controlled intersections (Revere Street & E. 104<sup>th</sup> Place and E. 104<sup>th</sup> Avenue & Quari Ct.) operate at level of service (LOS) “C” or better conditions.

Under the **2025 No-Build Traffic Scenario**, the signal-controlled intersection of E. 104th Avenue & Highway 2 operates at an overall level of service (LOS) “F” during the Weekday AM Peak Hour and level of service “E” during

the Weekday PM Peak Hour. With recommended improvements, the level of service will improve to a “D” condition in the Weekday AM Peak Hour and remains unchanged during the Weekday PM Peak Hour. The signal-controlled intersection of E. 104th Avenue & Revere Street operates at an overall level of service “C” during the Weekday AM Peak Hour and level of service “B” during the Weekday PM Peak Hour. In addition, the individual movements of the stop-controlled intersections (Revere Street & E. 104<sup>th</sup> Place and E. 104<sup>th</sup> Avenue & Quari Ct.) operate at level of service (LOS) “C” or better conditions.

Under the **2025 Build Traffic Scenario**, the signal-controlled intersection of E. 104th Avenue & Highway 2 will continue to operate at an overall level of service (LOS) “D” during the Weekday AM Peak Hour and level of service “E” during the Weekday PM Peak Hour. The signal-controlled intersection of E. 104th Avenue & Revere Street will continue to operate at an overall level of service “C” during the Weekday AM Peak Hour and level of service “B” during the Weekday PM Peak Hour. In addition, the individual movements of the stop-controlled intersections (Revere Street & E. 104<sup>th</sup> Place and E. 104<sup>th</sup> Avenue & Quari Ct.) operate at level of service (LOS) “C” or better conditions.

Under the **2045 No-Build Traffic Scenario**, the signal-controlled intersection of E. 104th Avenue & Highway 2 will operate at an overall level of service (LOS) “D” during the Weekday AM Peak and PM Peak Hours. The signal-controlled intersection of E. 104th Avenue & Revere Street will operate at an overall level of service “C” during the Weekday AM Peak Hour and level of service “B” during the Weekday PM Peak Hour. In addition, the individual movements at the stop-controlled intersection of Revere Street & E. 104<sup>th</sup> Place will operate at level of service (LOS) “C” or better conditions. The stop sign controlled intersection of E. 104<sup>th</sup> Avenue & Quari Ct. will have movements that operate at level of Service “D” and “F” conditions.

Under the **2045 Build Traffic Scenario**, the signal-controlled intersection of E. 104th Avenue & Highway 2 will continue to operate at an overall level of service (LOS) “D” during the Weekday AM Peak and PM Peak Hours. The signal-controlled intersection of E. 104th Avenue & Revere Street will continue to operate at an overall level of service “C” during the Weekday AM Peak Hour and level of service “B” during the Weekday PM Peak Hour. In addition, the individual movements at the stop-controlled intersection of Revere Street & E. 104<sup>th</sup> Place will operate at level of service (LOS) “C” or better conditions. The stop sign controlled intersection of E. 104<sup>th</sup> Avenue & Quari Ct. will have movements that operate at level of Service “D” , “E”, and “F” conditions.

CESO conducted a queue length analyses for the study network and reached the following conclusions:

CESO reviewed all study locations to determine if calculated queue lengths exceed existing storage lengths. The queue length analysis revealed the following:

- CESO determined that there are queue lengths that will exceed existing or proposed storages in the 2025 No-Build, 2025 Build, 2045 No-Build, and 2045 Build Traffic Scenarios. However, it should be noted that the No-Build queue lengths are not significantly increased by the addition of the proposed Car Wash development.

### **ENGINEERING VARIANCE REQUEST**

Based on the City’s requirements, all movements must operate at a Level of Service “D” or better conditions. Any movement that operates > Level of Service “D” must be documented and a variance granted. The following Table shows the No-Build and Build conditions along with a summary of the proposed Car Wash impact.

Lane	Existing				2025 No-Build				2025 Build				2045 No-Build				2045 Design Year			
	AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay
E. 104th Avenue & Highway 2 (Signal Controlled)																				
EBL	E	65.7	E	60.2	F	82.2	E	79.0	F	82.2	E	79.0	E	85.4	E	57.6	E	85.4	E	57.6

SBT	D	39.7	C	32.9	D	42.7	D	41.6	D	42.7	D	41.6	E	58.6	D	39.3	E	58.6	D	39.3
E. 104th Avenue & Quari Ct. (Stop Sign Controlled)																				
No movements operate at LOS "D" or worse condition.																				
E. 104th Avenue & Revere Street (Signal Controlled)																				
EBL	E	60.9	E	57.4	E	62.2	E	69.4	E	62.2	E	69.4	E	63.9	D	47.4	E	63.9	D	47.6
WBL	F	83.7	E	74.6	F	81.3	F	82.9	F	81.3	F	82.9	F	85.9	E	66.4	F	85.9	E	66.6
NBL	E	61.1	E	61.8	E	72.6	E	79.4	E	72.6	E	79.4	E	76.5	D	48.5	E	76.5	D	48.5
NBT	D	44.3	D	47.0	E	55.1	E	60.9	E	55.1	E	60.9	E	60.3	D	35.0	E	60.3	D	35.0
SBL	E	66.4	E	65.4	E	60.8	E	66.2	E	62.4	E	68.0	E	64.6	E	67.6	E	66.7	E	69.6
Revere Street & E. 104th Place (Stop Sign Controlled)																				
No movements operate at LOS "D" or worse condition.																				

The following intersections, movements, and scenarios result in a Level of Service “E” or worse condition:

**E. 104th Avenue & Highway 2 (Signal Controlled)**

- EBL (Existing AM/PM, 2025 No-Build AM/PM, 2025 Build AM/PM, 2045 No-Build AM/PM, and 2045 Design Year AM/PM)
- EBT (Existing PM, 2025 No-Build AM/PM, 2025 Build AM/PM, 2045 No-Build AM/PM, and 2045 Design Year AM/PM)
- WBL (Existing PM, 2025 No-Build PM, 2025 Build AM/PM)
- NBL (Existing PM, 2025 No-Build AM/PM, 2025 Build AM/PM, 2045 No-Build AM, and 2045 Design Year AM)
- SBL (Existing PM, 2025 No-Build AM/PM, 2025 Build AM/PM, 2045 No-Build AM/PM, and 2045 Design Year AM/PM)
- SBT (2045 No-Build AM, and 2045 Design Year AM)

**E. 104th Avenue & Revere Street (Signal Controlled)**

- EBL (Existing AM/PM, 2025 No-Build AM/PM, 2025 Build AM/PM, 2045 No-Build AM, and 2045 Design Year AM)
- WBL (Existing AM/PM, 2025 No-Build AM/PM, 2025 Build AM/PM, 2045 No-Build AM/PM, and 2045 Design Year AM/PM)
- NBL (Existing AM/PM, 2025 No-Build AM/PM, 2025 Build AM/PM, 2045 No-Build AM, and 2045 Design Year AM)
- NBT (2025 No-Build AM/PM, 2025 Build AM/PM, 2045 No-Build AM, and 2045 Design Year AM)
- SBL (Existing AM/PM, 2025 No-Build AM/PM, 2025 Build AM/PM, 2045 No-Build AM/PM, and 2045 Design Year AM/PM)

Based on the above Table, the proposed Car Wash Development will not increase the Level of Service over the Existing or No-Build traffic conditions. Additionally, the increase in delay is minimal since the proposed Car Wash Development will only add 38 total trips during the Weekday AM peak hour and 78 total trips during the Weekday PM peak hour. Once the generated trips are distributed to the street network, the impact to any single movement is 0.5% or less impact.

CESO on behalf of WT Group/Car Wash Developer respectfully requests a variance be granted based on the fact that the Level of Service conditions in the Existing or No-Build traffic conditions currently result in Levels of Service that exceed a “D” condition.

### **1.3. Summary of Recommendations**

The following summary of recommendations was generated based upon the findings in the Traffic Impact Study.

#### **2025 No-Build Traffic Scenario (Responsibility – Others):**

##### **E. 104<sup>th</sup> Avenue & CO-2**

- Extend the WB to SB dual left-turn lanes from 230' to 350' to accommodate the proposed queue length during the AM Peak Hour.
- Modify signal timing (cycle length and offsets). Refer to Synchro Summary Sheets for timing changes.

##### **E. 104<sup>th</sup> Avenue & Revere Street**

- Modify signal timing (cycle length and offsets). Refer to Synchro Summary Sheets for timing changes.

#### **2025 Build Traffic Scenario (Responsibility – Car Wash Development):**

- No improvements are recommended or required.

#### **2045 No-Build Traffic Scenario (Responsibility – Others):**

##### **E. 104<sup>th</sup> Avenue**

- Construct an additional through lane in the eastbound and westbound directions along E. 104<sup>th</sup> Avenue. According to the City, E. 104<sup>th</sup> Avenue is set up to accommodate a three (3) lane through section in each direction based on the additional width of the center grass median area.

#### **2045 Design Year Traffic Scenario (Responsibility – Car Wash Development):**

- No improvements are recommended or required.

## 2. Introduction

This report is submitted on behalf of WT Group, in connection with its application to Commerce City for site plan approval. The Traffic Impact Study (TIS) conducted by CESO, Inc. identifies the traffic related impacts, if any, associated with the Proposed Car Wash Development; referred to herein as “Proposed Car Wash Development.”

The Proposed Car Wash Development is to be located at 12411 East 104th Avenue within Commerce City, Adams County, Colorado. The full buildout of the Proposed Car Wash Development is projected to include a 4,600 S.F. car wash building with one (1) car wash tunnel and three (3) queueing lanes. The Proposed Car Wash Development is projected to include approximately 27 parking spaces for passenger cars, with 5 of those spaces being employee parking spaces.

WT Group retained CESO, Inc. to prepare the Traffic Impact Study for the Proposed Car Wash Development and present the details of a safe and efficient access system relating to WT Group’s application for approval of the following:

- Construction of the Site driveway connecting to the internal east/west strip shopping center road.

This report presents the methodologies, analyses, and results of the Traffic Impact Study (TIS) for traffic generated by the Proposed Car Wash Development. The purpose of the TIS was to identify and mitigate traffic related impacts, if any, during typical weekday AM and PM Peak Hours of the adjacent street traffic corresponding with the hours of operation for the Proposed Car Wash Development.

The following intersections were analyzed in the Traffic Impact Study:

- E. 104th Avenue & Highway 2 (Signal Controlled)
- E. 104th Avenue & Quari Ct. (Stop Sign Controlled)
- E. 104th Avenue & Revere Street (Signal Controlled)
- Revere Street & E. 104th Place (Stop Sign Controlled)

The following traffic scenarios were included in the analysis:

**Existing Traffic Scenario** – Represents current (Year 2024) traffic conditions during the weekday AM and PM Peak Hours of the adjacent roadway network. The Existing Traffic Scenario served as a baseline for comparison of the traffic impacts in relation to the Proposed Car Wash Development.

**2025 No-Build Traffic Scenario** – Represents traffic conditions during the weekday AM and PM Peak Hours of the adjacent roadway network that would exist during year 2025, without the Proposed Car Wash Development. NOTE: Mixed Use Traffic Volumes from the Burlington/Catellus PUD Development were added to the 2025 No-Build as an approved Development.

**2025 Build Traffic Scenario** – Represents traffic conditions during the weekday AM and PM Peak Hours of the adjacent roadway network that would exist during year 2025, with the Proposed Car Wash Development constructed and fully operational.

**2045 No-Build Traffic Scenario** – Represents traffic conditions during the weekday AM and PM Peak Hours of the adjacent roadway network that would exist during year 2045, without the Proposed Car Wash Development. NOTE: Mixed Use Traffic Volumes from the Burlington/Catellus PUD Development were added to the 2025 No-Build as an approved Development.

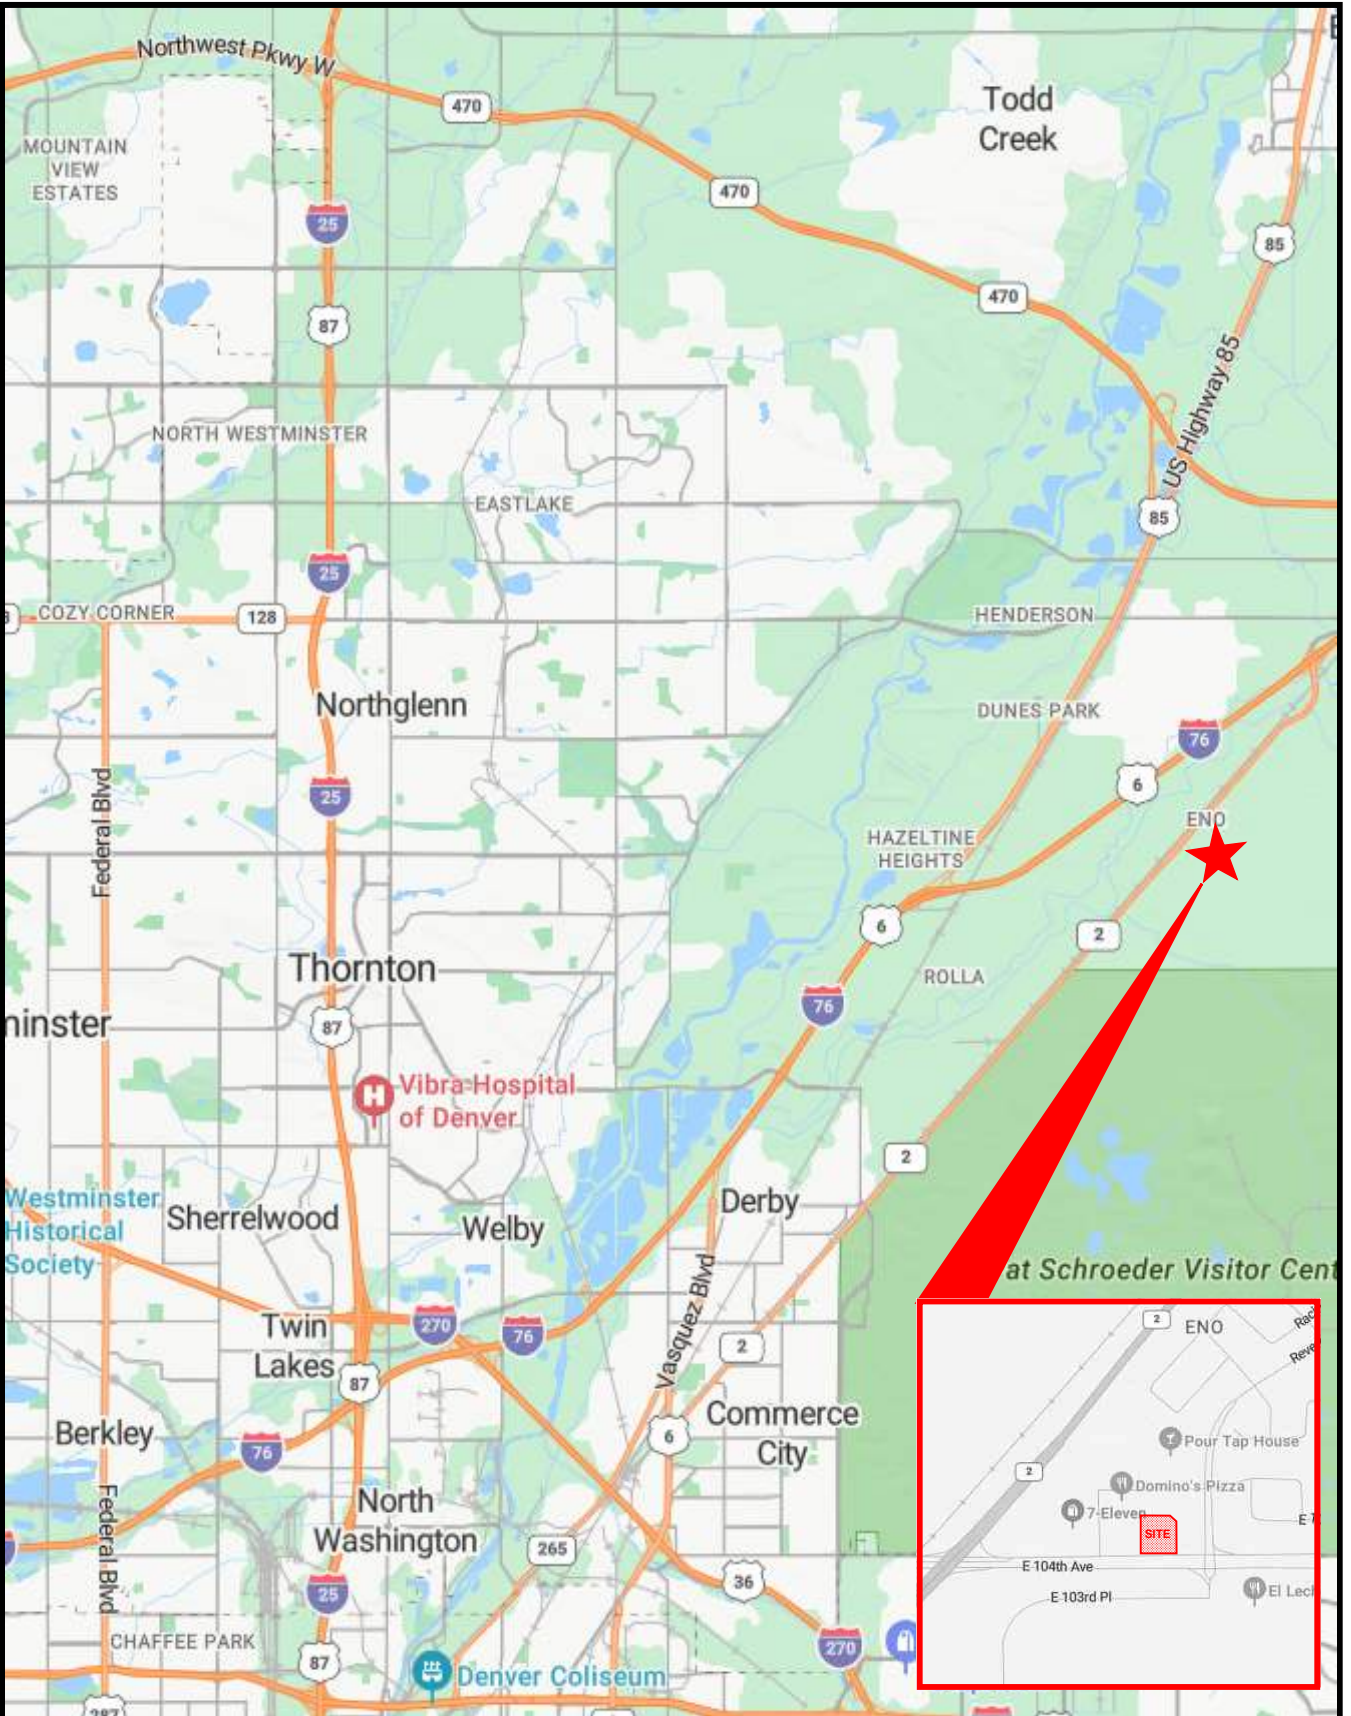

**2045 Design Year Traffic Scenario** – Represents traffic conditions during the weekday AM and PM Peak Hours of the adjacent roadway network that would exist during year 2045, with the Proposed Car Wash Development constructed and fully operational.

The Site Location with respect to the study area and the Site Plan for the Proposed Car Wash Development are illustrated on Figures 1 and 2 of the report.

## 2.1. Study Procedure

The following studies and analyses were undertaken:

1. Traffic counts were conducted by GHA, Inc. on Wednesday, April 10<sup>th</sup>, 2024, between the hours of 7:00 AM to 9:00 AM and 3:00 PM to 6:00 at the following locations:
  - E. 104th Avenue & Highway 2 (Signal Controlled)
  - E. 104th Avenue & Quari Ct. (Stop Sign Controlled)
  - E. 104th Avenue & Revere Street (Signal Controlled)
  - Revere Street & E. 104th Place (Stop Sign Controlled)
2. Capacity analyses of the Existing Peak Hour Traffic Volumes (Figure 4) were conducted to determine the capacity of the key study intersections during AM and PM Peak Hours using Synchro Version 12.0 HCM 7<sup>th</sup> Edition Signalized methodology.
3. Increase the Existing Peak Hour Traffic Volumes (Figure 4) by a two (2) percent growth rate that was supplied by the City to arrive at 2025 No-Build Peak Hour Traffic Volumes (Figure 5). In addition, the mixed-use traffic volumes from the Burlington/Catellus PUD Development were added to the 2025 No-Build as an approved Development.
4. Capacity analyses of the 2025 No-Build Peak Hour Traffic Volumes (Figure 5) were conducted to determine the capacity of the key study intersections during AM and PM Peak Hours using Synchro Version 12.0 HCM 7<sup>th</sup> Edition Signalized methodology.
5. Analyses were conducted to determine the potential traffic volumes generated by the Proposed Car Wash Development under the 2025 Build Traffic Scenario utilizing the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11<sup>th</sup> Edition and traffic count data collected from three (3) similar operating Car Wash Developments (see Table 5).
6. Directional distribution analyses were conducted to determine the potential distribution of patrons for the Proposed Car Wash Development under the 2025 Build Traffic Scenario (Figure 6).
7. The Site Generated Traffic Volumes (Figure 7) were added to the 2025 No-Build Peak Hour Traffic Volumes (Figure 5) to reflect the 2025 Build Peak Hour Traffic Volumes (Figure 8).
8. Capacity analyses of the 2025 Build Peak Hour Traffic Volumes (Figure 8) were conducted to determine the capacity of the key study intersections under the 2025 Build Traffic Scenario during AM and PM Peak Hours using Synchro Version 12.0 HCM 7<sup>th</sup> Edition TWSC and Signalized methodology.

9. Increase the 2025 No-Build Peak Hour Traffic Volumes (Figure 5) by a two (2) percent growth rate for twenty (20) years to arrive at 2045 No-Build Peak Hour Traffic Volumes (Figure 9). In addition, the mixed-use traffic volumes from the Burlington/Catellus PUD Development were added to the 2025 No-Build as an approved Development.
10. Capacity analyses of the 2045 No-Build Peak Hour Traffic Volumes (Figure 9) were conducted to determine the capacity of the key study intersections during AM and PM Peak Hours using Synchro Version 12.0 HCM 7<sup>th</sup> Edition Signalized methodology.
11. The Site Generated Traffic Volumes (Figure 7) were added to the 2045 No-Build Peak Hour Traffic Volumes (Figure 9) to reflect the 2045 Design Year Peak Hour Traffic Volumes (Figure 10).
12. Capacity analyses of the 2045 Design Year Peak Hour Traffic Volumes (Figure 10) were conducted to determine the capacity of the key study intersections during AM and PM Peak Hours using Synchro Version 12.0 HCM 7<sup>th</sup> Edition Signalized methodology.
13. Queue length analyses were completed using Synchro Version 12.0 in combination with SimTraffic to determine if existing or proposed storage lengths would accommodate increased traffic queues as a result of the Proposed Car Wash Development.
14. Recommendations for roadway improvements were generated under the 2025 Build and 2045 Design Year Traffic Scenario based upon the capacity/queue length analyses of the surrounding roadway network. Application of the recommendations and evaluation of the capacity at the key study intersections, during the weekday AM and PM Peak Hours, were completed using Synchro Version 12.0 methodology.

### 3. Roadway and Traffic Conditions in the Vicinity of the Site

An inventory of existing transportation conditions in the vicinity of the Site was created to form a database for use in projecting Build conditions.

#### 3.1. Study Location and Area Land Use

The Proposed Car Wash Development is to be located at 12411 East 104th Avenue within Commerce City, Adams County, Colorado. Nearby land uses include primarily residential and commercial development.

#### 3.2. Area Roadway Characteristics

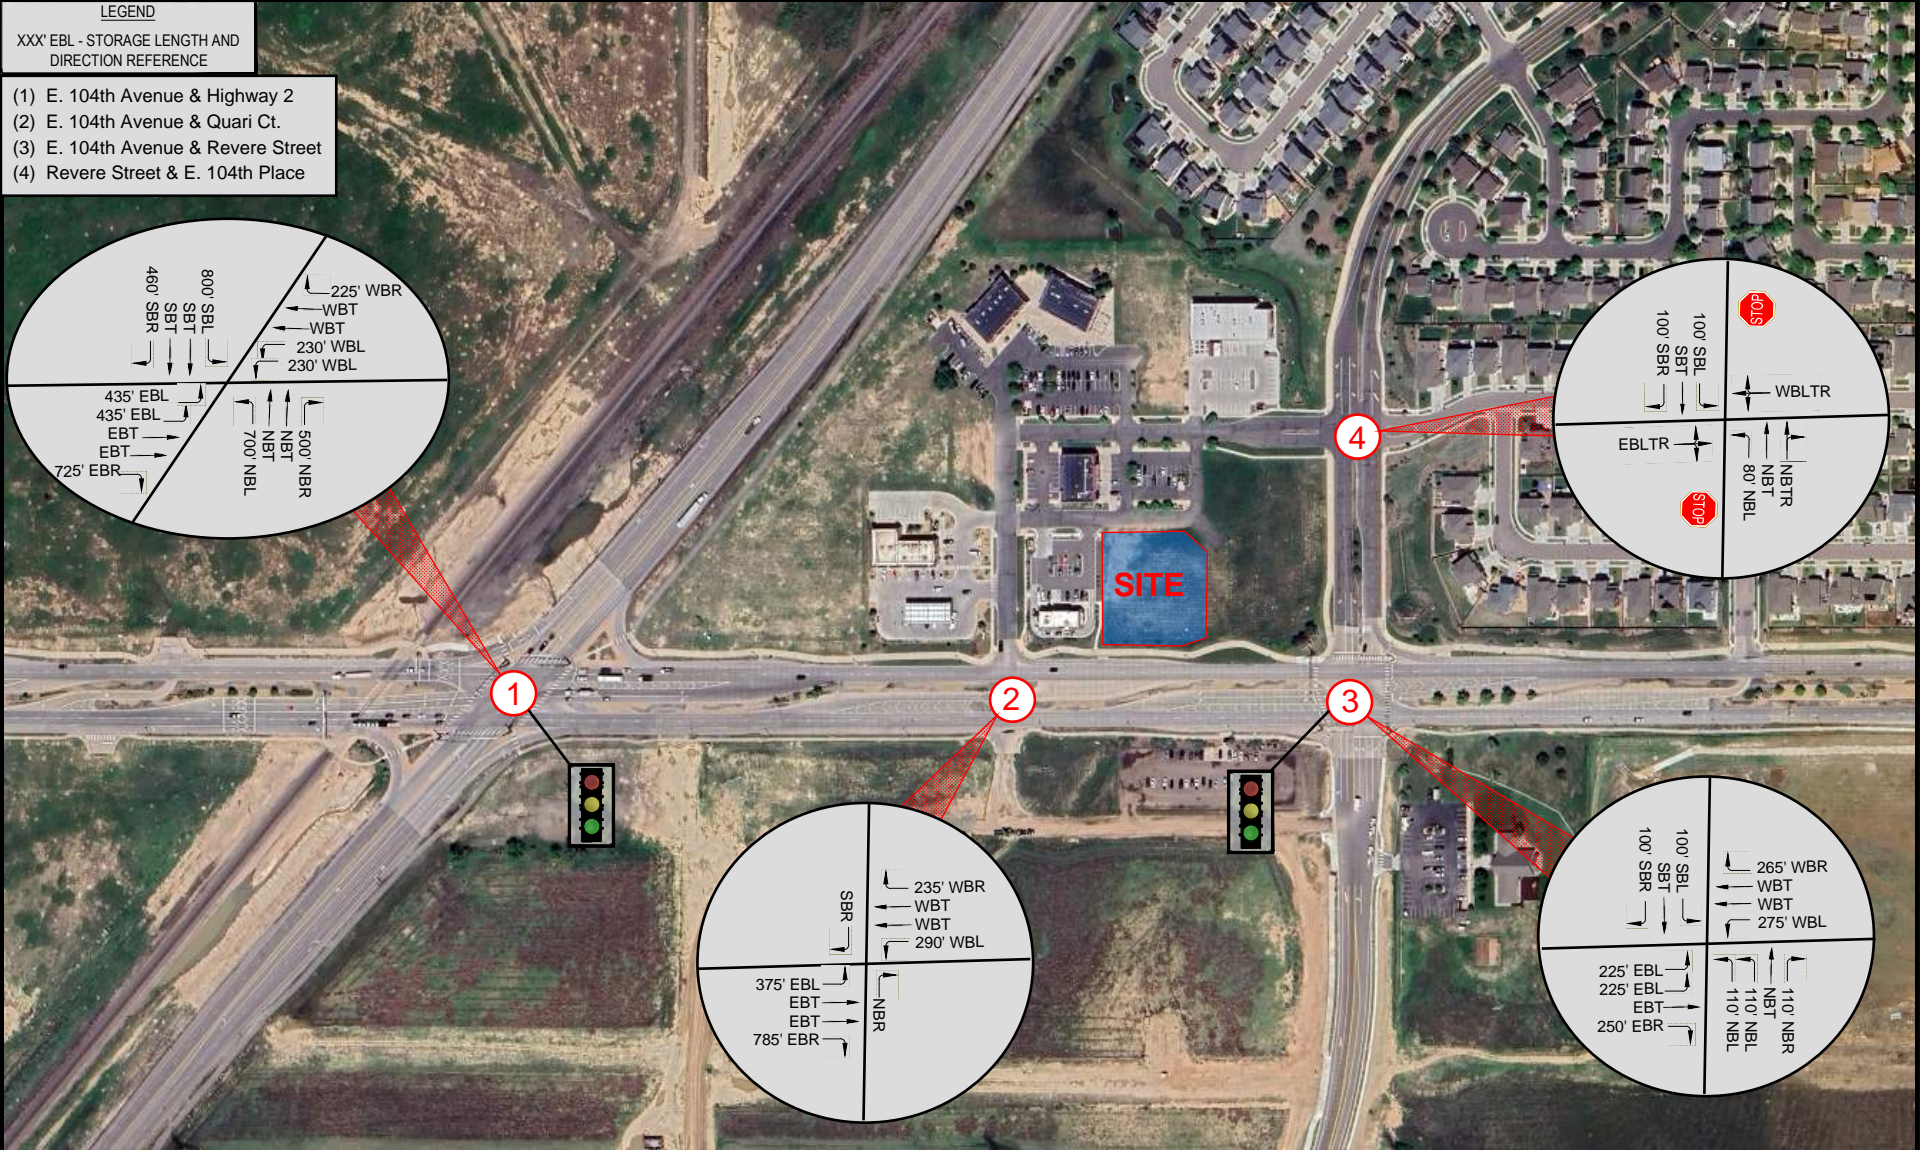

**East 104<sup>th</sup> Avenue** – East 104<sup>th</sup> Avenue runs in the east/west direction in the vicinity of the site. East 104<sup>th</sup> Avenue is a two-way divided roadway with two lanes in each direction. East 104<sup>th</sup> Avenue is classified as a Principal Arterial according to Adams County Planning and Development Department. The posted speed limit on East 104<sup>th</sup> Avenue is 45 mph.

**Revere Street** – Revere Street runs in the north/south direction in the vicinity of the site. Revere Street is a two-way roadway with two lanes in each direction. The posted speed limit on Revere Street is 30 mph.

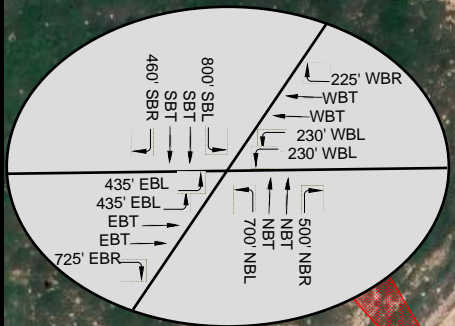

**CO-2** – CO-2 runs in the northeast/southwest direction in the vicinity of the site. CO-2 is a two-way divided roadway with two lanes in each direction. CO-2 is classified as a state route according to the Colorado Department of Transportation (CDOT). CO-2 is under the jurisdiction of CDOT. The speed limit on CO-2 is 45 mph.

**Quari Court** – Quari Court runs in the north/south direction in the vicinity of the site. Quari Court is classified as a local road. Quari Court is under the jurisdiction of Commerce City. The speed limit on Quari Court is unposted and assumed to be 25 mph.

The Existing Transportation System is illustrated on Figure 3 of the report.

### 3.3. Existing Traffic Volumes

Traffic counts were conducted by GHA, Inc. on Wednesday, April 10<sup>th</sup>, 2024, between the hours of 7:00 AM to 9:00 AM and 3:00 PM to 6:00 PM at the following locations:

- E. 104th Avenue & Highway 2 (Signal Controlled)
- E. 104th Avenue & Quari Ct. (Stop Sign Controlled)
- E. 104th Avenue & Revere Street (Signal Controlled)
- Revere Street & E. 104th Place (Stop Sign Controlled)

The weekday peak hours of the Traffic Impact Study roadway network were determined to occur between the hours of:

- 7:15 AM – 8:15 AM (AM Peak Hour).
- 4:15 PM – 5:15 PM (PM Peak Hour).

Count data collected consists of turning movement counts with classification breakouts of lights, buses, single-unit trucks, and articulated trucks. The Existing Traffic Count Data and Signal Timing Sheets are located in **Appendix A** of the report.

The Existing Peak Hour Traffic Volumes are illustrated on Figure 4 of the report.

### 3.4. Capacity Analysis Parameters

The capacity of an intersection (signalized or unsignalized) can best be described by its corresponding Level of Service (LOS). The level of service of an intersection is a qualitative measure of the various attributes of an intersection. There are six levels of service ranging from “ideal” free flow conditions at LOS “A,” to forced or “breakdown” conditions at LOS “F.” The level of service for signalized intersections is based upon the average stopped delay per vehicle for various movements within the intersection. Although volume capacity ratio (v/c) affects delay, there are other parameters that more strongly affect it, such as the quality of progression, length of green phases, cycle lengths, and others. Thus, for any given v/c ratio, a range of delay values may result, and vice versa.

The level of service for unsignalized intersections is based upon total delay. Total delay is defined in the *Highway Capacity Manual, Seventh Edition: A Guide for Multimodal Mobility Analysis*, as the total elapsed time from when a vehicle stops at the end of the queue until the vehicle departs from the stop line; this time includes the time required for the vehicle to travel from the last-in-queue position to the first-in-queue position. Table 1 summarizes the LOS definitions for unsignalized intersections. Throughout the report “unsignalized intersections” are commonly referred to as “stop sign controlled.”

**Table 1**  
**Level of Service Criteria (Unsignalized Intersections)**

Level of Service	Delay per Vehicle (Sec.)	Description
A	≤ 10.0	Little or no delay.
B	> 10.0 and ≤ 15.0	Short traffic delays.
C	> 15.0 and ≤ 25.0	Average traffic delays.
D	> 25.0 and ≤ 35.0	Long traffic delays.
E	> 35.0 and ≤ 50.0	Very long traffic delays.
F	≥ 50.0	Extreme traffic delays.

Source: *Highway Capacity Manual, Seventh Edition: A Guide for Multimodal Mobility Analysis*. Transportation Research Board.

Highway Capacity Manual 2022 (HCM 7<sup>th</sup> Edition) methodology was used in the Traffic Impact Study to remain consistent with “state-of-the-practice” professional standards. It is important to note that the Level of Service Criteria for unsignalized intersections is different than for signalized intersections. For example, a delay of 18 seconds yields level of service C under the unsignalized LOS criteria (see Table 1) while yielding level of service B under the signalized intersection LOS criteria (see Table 2). Table 2 summarizes the LOS definitions for signalized intersections.

**Table 2**  
**Level of Service Criteria (Signalized Intersections)**

Level of Service	Delay per Vehicle (Sec.)	Description
A	< 10.0	Most vehicles do not stop at all.
B	> 10.0 and ≤ 20.0	More vehicles stop than with LOS A.
C	> 20.0 and ≤ 35.0	The number of vehicles stopping is significant, although many pass through without stopping.
D	> 35.0 and ≤ 55.0	Many Vehicles stop. Individual cycle failures are noticeable.
E	> 55.0 and ≤ 80.0	Considered to be the limit of acceptable delay. Individual cycle failures are frequent.
F	> 80.0	Unacceptable delay.

Source: *Highway Capacity Manual, Seventh Edition: A Guide for Multimodal Mobility Analysis*. Transportation Research Board.

Highway Capacity Manual 2022 (HCM 7<sup>th</sup> Edition) methodology was used in the Traffic Impact Study to remain consistent with “state-of-the-practice” professional standards. Synchro Version 12.0 was utilized to calculate delay and level of service values. Synchro Version 12.0 model parameters include traffic volumes, movements, peak hour factors, heavy vehicle percentage, intersection traffic control, and storage lengths. The peak hour factors (PHF) from the intersection TMCs were used and a PHF of 0.92 was used for the proposed site driveway intersections.

### 3.5. Existing Traffic Scenario Capacity Analysis

Utilizing the Existing Traffic Volumes illustrated on Figure 4, capacity calculations were performed for the key study intersections. Capacity calculations followed procedures documented in the *Highway Capacity Manual, Seventh Edition: A Guide for Multimodal Mobility Analysis* (Transportation Research Board, 2022). All study intersections were analyzed with Synchro Version 12.0 HCM 7<sup>th</sup> Edition Signalized methodology.

The capacity analyses results for the Existing Traffic Scenario are summarized in Table 3 below and can be found in **Appendix B** of the report.

Under the **Existing Traffic Scenario**, the signal-controlled intersection of E. 104th Avenue & Highway 2 operates at an overall level of service (LOS) “F” during the Weekday AM Peak Hour and level of service “E” during the Weekday PM Peak Hour. The signal-controlled intersection of E. 104th Avenue & Revere Street operates at an overall level of service “C” during the Weekday AM Peak Hour and level of service “B” during the Weekday PM Peak Hour. In addition, the individual movements of the stop-controlled intersections (Revere Street & E. 104<sup>th</sup> Place and E. 104<sup>th</sup> Avenue & Quari Ct.) operate at level of service (LOS) “C” or better conditions.

## 4. Estimates of 2025 No-Build Traffic in the Vicinity of the Site

### 4.1. 2025 No-Build Traffic Volumes

The 2025 No-Build Peak Hour Traffic Volumes – Total Volumes are illustrated on Figure 5 of the report. A growth rate of two (2) percent per year was supplied by Commerce City to be used on all study roadways. In addition, the mixed-use traffic volumes from the Burlington/Catellus PUD Development were added to the 2025 No-Build as an approved Development.

### 4.2. 2025 No-Build Traffic Scenario Capacity Analysis

Utilizing the 2025 No-Build Peak Hour Traffic Volumes shown on Figure 5, capacity calculations were performed for the key study intersections. All capacity calculations within the TIS followed procedures documented in the *Highway Capacity Manual, Seventh Edition: A Guide for Multimodal Mobility Analysis* (Transportation Research Board, 2022). All study intersections were analyzed using Synchro Version 12.0 HCM 7<sup>th</sup> Edition Signalized methodology.

The capacity analyses results for the 2025 No-Build Traffic Scenario are summarized in Table 4 below and can be found in **Appendix C** of the report.

**Table 4**

Under the **2025 No-Build Traffic Scenario**, the signal-controlled intersection of E. 104th Avenue & Highway 2 operates at an overall level of service (LOS) “F” during the Weekday AM Peak PM Peak Hours. With recommended improvements, the level of service will improve to a “D” condition in the Weekday AM Peak Hour and improves to a level of service “E” during the Weekday PM Peak Hour. The signal-controlled intersection of E. 104th Avenue & Revere Street operates at an overall level of service “C” during the Weekday AM Peak Hour and PM Peak Hours. In addition, the individual movements of the stop-controlled intersections (Revere Street & E. 104<sup>th</sup> Place and E. 104<sup>th</sup> Avenue & Quari Ct.) operate at level of service (LOS) “C” or better conditions.

## 5. Development Description

### 5.1. Proposed Site Access

One (1) new full access stop sign controlled driveway (one inbound lane and one outbound lane) will be constructed on the internal east/west Strip Shopping Center Driveway. Internal circulation shows that all traffic will enter and exit the single access point from the internal east/west road. Parking spots will be located in the middle of the Site, directly to the south of the Site Driveway. Continuing straight then right on-site are three (3) queuing lanes to pay at a kiosk before entering a single lane for the car wash tunnel. Cars will follow a clockwise path to return to the Site Driveway in order to exit. A stop bar and stop sign will be provided in the drive aisle connecting the driveway to the parking lot to help facilitate vehicles entering the Site Driveway and vehicles exiting the parking lot in a safe manner.

### 5.2. Site Generated Traffic Volumes

Studies of similar developments throughout North America have shown that the amount of traffic generated will be functionally related to some unit of activity (i.e., number of dwelling units, vehicles, etc.). In development, site traffic fluctuates substantially on different days and hours throughout the year. Therefore, it is imperative to select an appropriate hourly volume on which to base the design of the external roadway and site access facilities. The weekday AM and PM Peak Hours were selected based on the adjacent street traffic during this hour.

The full buildout of the Proposed Car Wash Development is projected to include a 4,600 S.F. car wash building with one (1) car wash tunnel and three (3) queueing lanes. The Proposed Car Wash Development is projected to include approximately 27 parking spaces for passenger cars, with 5 of those spaces being for employees.

For analysis purposes, the base variable unit for the trip generation rates was number of car wash tunnels. CESO completed a Trip Generation Study to compare data contained in the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11<sup>th</sup> Edition*, against traffic count data collected from three (3) similar operating Car Wash Developments. The independent trip generation results were used for the Weekday AM peak hour since ITE does not have a trip generation category for this hour and ITE was used for the Weekday PM peak hour. **Appendix D** includes the Trip Generation Study, dated 05/17/2023 along with ITE 11<sup>th</sup> Edition Trip Generation data.

Traffic count data was collected at the following similar Car Wash Development locations:

- 262 Bethlehem Pike, Colmar, PA 18915
- 120 S Gary Ave, Carol Stream, IL 60188
- 2903 Kirk Road, Aurora, IL 60502

All three (3) sites have similar operations, with one (1) car wash tunnel on site.

Manual counts were conducted at each of the above listed study locations during the following time periods:

- Weekday AM Peak Hour (7:00 AM – 9:00 AM)
- Weekday PM Peak Hour (4:00 PM – 6:00 PM)

These counts focused on collecting the volume of cars entering the car wash tunnel for each study location.

The Similar Site Generated Traffic Volumes are listed below in Table 5, summarizing the inbound and outbound volumes for the similar Car Wash Developments during the highest peak hour of study.

**Table 5**  
**Similar Site Generated Traffic Volumes**

Location	Size	Unit	Total Generated Trips					
			Weekday AM Peak Hour			Weekday PM Peak Hour		
			Tot	In	Out	Tot	In	Out
Colmar, PA	1	Car Wash Tunnel	42	21	21	52	26	26
	<i>Entering (%) / Exiting (%)</i>		100%	50%	50%	100%	50%	50%
Carol Stream, IL	1	Car Wash Tunnel	46	23	23	66	33	33
	<i>Entering (%) / Exiting (%)</i>		100%	50%	50%	100%	50%	50%
Aurora, IL	1	Car Wash Tunnel	24	12	12	76	38	38
	<i>Entering (%) / Exiting (%)</i>		100%	50%	50%	100%	50%	50%
<i>Total Average Car Trips</i>			37.3	18.7	18.7	64.6	32.3	32.3
<i>Total Trip Generation</i>			38	19	19	66*	33*	33*

\* ITE Trip Generation Manual is used for the Weekday PM Peak Hour since trips generated by ITE are higher (78 total trips: 39 inbound and 39 outbound).

The full buildout of the Proposed Car Wash Development is estimated to generate 38 trips during the Weekday AM Peak Hour (19 inbound and 19 outbound) and 78 trips during the Weekday PM Peak Hour (39 inbound and 39 outbound).

**5.3. Directional Distribution of Site Generated Traffic Volumes**

The directional distribution of the development-generated traffic is a function of several variables. The assumptions and methods used in estimating the direction in which traffic will approach and depart the Site varies with several location-specific conditions such as:

- Size and type of the proposed development.
- Population distribution within the defined area of influence.
- Prevailing operating conditions on the existing street system.

The anticipated directional distribution of site generated trips is summarized in Table 6. Additionally, Figure 6 illustrates the primary trip directional distribution for the Site Generated Traffic Volumes.

- (1) E. 104th Avenue & Highway 2
- (2) E. 104th Avenue & Quari Ct.
- (3) E. 104th Avenue & Revere Street
- (4) Revere Street & E. 104th Place

## 6. Estimates of 2025 Build Traffic in the Vicinity of the Site

### 6.1. 2025 Build Traffic Volumes

The 2025 Build Peak Hour Traffic Volumes – Total Volumes (Figure 8) were calculated by adding the Site Generated Traffic Volumes (Figure 7) to the 2025 No-Build Peak Hour Traffic Volumes – Total Volumes (Figure 5).

### 6.2. 2025 Build Traffic Scenario Capacity Analysis

Utilizing the 2025 Build Peak Hour Traffic Volumes shown on Figure 8, capacity calculations were performed for the key study intersections and proposed site driveway. All capacity calculations within the TIS followed procedures documented in the *Highway Capacity Manual, Seventh Edition: A Guide for Multimodal Mobility Analysis* (Transportation Research Board, 2022). All study intersections were analyzed using Synchro Version 12.0 HCM 7<sup>th</sup> Edition TWSC and Signalized methodology.

The capacity analyses results for the 2025 Build Traffic Scenario are summarized in Table 7 below and can be found in **Appendix E** of the report.

## 7. Estimates of 2045 No-Build Traffic in the Vicinity of the Site

### 7.1. 2045 No-Build Traffic Volumes

The 2045 No-Build Weekday Peak Hour Traffic Volumes (Figure 9) were calculated by applying a two (2) percent compound growth rate to the 2025 No-Build Weekday Peak Hour Traffic Volumes (Figure 5) for twenty (20) years.

### 7.2. 2045 No-Build Traffic Scenario Capacity Analysis

Utilizing the 2045 No-Build Peak Hour Traffic Volumes shown on Figure 9, capacity calculations were performed for the key study intersections. All capacity calculations within the TIS followed procedures documented in the *Highway Capacity Manual, Seventh Edition: A Guide for Multimodal Mobility Analysis* (Transportation Research Board, 2022). All study intersections were analyzed using Synchro Version 12.0 HCM 7<sup>th</sup> Edition Signalized methodology.

The capacity analyses results for the 2045 No-Build Traffic Scenario are summarized in Table 8 and can be found in **Appendix F** of the report.

## 8. Estimates of 2045 Design Year Traffic in the Vicinity of the Site

### 8.1. 2045 Design Year Traffic Volumes

The 2045 Design Year Peak Hour Traffic Volumes – Total Volumes (Figure 10) were calculated by adding the Site Generated Traffic Volumes (Figure 7) to the 2045 No-Build Peak Hour Traffic Volumes (Figure 9).

### 8.2. 2045 Design Year Traffic Scenario Capacity Analysis

Utilizing the 2045 Design Year Peak Hour Traffic Volumes shown on Figure 10, capacity calculations were performed for the key study intersections and proposed site driveway. All capacity calculations within the TIS followed procedures documented in the *Highway Capacity Manual, Seventh Edition: A Guide for Multimodal Mobility Analysis* (Transportation Research Board, 2022). All study intersections were analyzed using Synchro Version 12.0 HCM 7<sup>th</sup> Edition TWSC and Signalized methodology.

The capacity analyses results for the 2045 Design Year Traffic Scenario are summarized in Table 9 can be found in **Appendix G** of the report.

## 9. Turn Lane Analysis

Since turn lanes (right and left) currently exist at each study location, turn lane warrants were not reviewed. However, a queueing analysis was performed to determine if any of the existing turn lane lengths would need to be extended. The Queueing Analysis is summarized in Section 10 of the report.

## 10. Queue Length Analysis

### 10.1. Queue Length Analysis Procedure and Results

The 95<sup>th</sup> percentile queue lengths were calculated using Synchro Version 12.0 in combination with SimTraffic. CESO reviewed the 2025/2045 No-Build and Build Traffic Scenarios. The results of the analyses are listed below in Tables 10 and 11. The 95<sup>th</sup> percentile queue length analysis summary sheets are located in **Appendix H** of the report.

**Table 10**

## 10.2. Queue Length Analysis Summary

CESO reviewed all study locations to determine if calculated queue lengths exceed existing storage lengths. The queue length analysis revealed the following:

- CESO determined that there are queue lengths that will exceed existing or proposed storages in the 2025 No-Build, 2025 Build, 2045 No-Build, and 2045 Build Traffic Scenarios. However, it should be noted that the No-Build queue lengths are not significantly increased by the addition of the proposed Car Wash development.

### 10.3. On-Site Car Wash Queuing

An on-site queuing analysis for the Proposed Car Wash Development was evaluated to determine if any queues from the car wash would extend onto the internal East/West Strip Shopping Center Road. The proposed development provides three (3) queuing lanes, totaling approximately 153 feet of storage and an additional 55 feet for the internal drive aisle, for a total of 208 feet. Assuming one vehicle occupies 25 feet, the Site allows for 8 total vehicles to fit in queue before spilling onto the East/West Strip Shopping Center Road.

The Car Wash operator anticipates the wait time at the kiosk to be approximately 60 seconds. With this assumption, the On-Site Queuing Analysis looked at a 60 second interval to best approximate the worst-case scenario. The average of the highest 15-minute interval of peak hour demand was used to determine the flow rate in vehicles per second.

The Poisson Distribution Formula was used within an Excel spreadsheet to determine the on-site car wash queuing for the project. The formula can be used up to any (n) number of vehicles. By taking the summation of the probabilities, the formula predicts how likely zero to the (n) number of vehicles will arrive in the given interval. For this scenario, the Poisson Distribution Formula was used to determine the probability that 8 or more vehicles would be entering the site in any given 60 second interval.

It was determined that there is a zero percent chance that 8 or more vehicles will enter the Site in any 60 second interval. Narrowing the summation of probabilities down showed that it will never be expected for more than seven (7) vehicles to arrive in any 60 second interval of operation for the Proposed Car Wash Development.

The Excel spreadsheet showing the Poisson Distribution calculations can be found in **Appendix I** of the report.

## 11. Summary of Recommendations

### 11.1. Recommendations

The following summary of recommendations was generated based upon the findings in the Traffic Impact Study.

#### **2025 No-Build Traffic Scenario (Responsibility – Others):**

##### **E. 104<sup>th</sup> Avenue & CO-2**

- Extend the WB to SB dual left-turn lanes from 230' to 350' to accommodate the proposed queue length during the AM Peak Hour.
- Modify signal timing (cycle length and offsets). Refer to Synchro Summary Sheets for timing changes.

##### **E. 104<sup>th</sup> Avenue & Revere Street**

- Modify signal timing (cycle length and offsets). Refer to Synchro Summary Sheets for timing changes.

#### **2025 Build Traffic Scenario (Responsibility – Car Wash Development):**

- No improvements are recommended or required.

#### **2045 No-Build Traffic Scenario (Responsibility – Others):**

##### **E. 104<sup>th</sup> Avenue**

- Construct an additional through lane in the eastbound and westbound directions along E. 104<sup>th</sup> Avenue. According to the City, E. 104<sup>th</sup> Avenue is set up to accommodate a three (3) lane through section in each direction based on the additional width of the center grass median area.

#### **2045 Design Year Traffic Scenario (Responsibility – Car Wash Development):**

- No improvements are recommended or required.

**APPENDIX A**  
**EXISTING TRAFFIC COUNT DATA**

### Intersection Summary

HCM 7th Control Delay, s/veh	109.8
HCM 7th LOS	F

### Notes

User approved pedestrian interval to be less than phase max green.  
 Unsignalized Delay for [NER, EBR, WBR, SWR] is excluded from calculations of the approach delay and intersection delay.

### Intersection Summary

HCM 7th Control Delay, s/veh	23.9
HCM 7th LOS	C

### Notes

- User approved pedestrian interval to be less than phase max green.
- Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

### Intersection Summary

HCM 7th Control Delay, s/veh	11.5
HCM 7th LOS	B

### Notes

- User approved pedestrian interval to be less than phase max green.
- Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

### Intersection Summary

HCM 7th Control Delay, s/veh	46.6
HCM 7th LOS	D

### Notes

- User approved pedestrian interval to be less than phase max green.
- \* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

### Intersection Summary

HCM 7th Control Delay, s/veh	73.7
HCM 7th LOS	E

### Notes

User approved pedestrian interval to be less than phase max green.  
 Unsignalized Delay for [NER, EBR, WBR, SWR] is excluded from calculations of the approach delay and intersection delay.

### Intersection Summary

HCM 7th Control Delay, s/veh	20.0
HCM 7th LOS	B

### Notes

- User approved pedestrian interval to be less than phase max green.
- \* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

### Intersection Summary

HCM 7th Control Delay, s/veh	46.0
HCM 7th LOS	D

### Notes

- User approved pedestrian interval to be less than phase max green.
- \* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

### Intersection Summary

HCM 7th Control Delay, s/veh	76.1
HCM 7th LOS	E

### Notes

User approved pedestrian interval to be less than phase max green.  
 Unsignalized Delay for [NER, EBR, WBR, SWR] is excluded from calculations of the approach delay and intersection delay.

### Intersection Summary

HCM 7th Control Delay, s/veh	20.2
HCM 7th LOS	C

### Notes

- User approved pedestrian interval to be less than phase max green.
- \* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

### Intersection Summary

HCM 7th Control Delay, s/veh	51.5
HCM 7th LOS	D

### Notes

User approved pedestrian interval to be less than phase max green.

\* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

### Intersection Summary

HCM 7th Control Delay, s/veh	50.9
HCM 7th LOS	D

### Notes

\* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [NER, EBR, WBR, SWR] is excluded from calculations of the approach delay and intersection delay.

### Intersection Summary

HCM 7th Control Delay, s/veh	51.4
HCM 7th LOS	D

### Notes

User approved pedestrian interval to be less than phase max green.

\* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.

### Intersection Summary

HCM 7th Control Delay, s/veh	51.0
HCM 7th LOS	D

### Notes

\* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [NER, EBR, WBR, SWR] is excluded from calculations of the approach delay and intersection delay.

### Intersection Summary

HCM 7th Control Delay, s/veh	24.8
HCM 7th LOS	C

### Notes

\* HCM 7th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.
